DETAILED ACTION

1. Claims 14-26 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 7-10-06.

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-13 and 33-40, drawn to a clap with a strap and a method of use, classified in class 24, subclass 481.
 - II. Claims 27-32, drawn to an aircraft comprising a clamp, classified in class 244, subclass 129.1.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions I and II are directed to related inventions. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed are distinct because Group I is directed to a clamp which is holding a generic item to a generic electrically conductive structure, while Group II is directed to an aircraft which comprises a similar clamp but does not have an item being clamped to an electrically conductive structure. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
